Response to Arguments

1. Applicant's arguments with respect to claims 1-18 have been considered but are most in view of the new ground(s) of rejection.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35
 U.S.C. 102 that form the basis for the rejections under this section made in this
 Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-18 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent No. 5,758,257 Herz et al. (Herz) of record.

As to claim 1, Herz teaches a method for supporting a broadcast service, comprising: for each of a plurality of customers of the broadcast service, determining, by executing server software (it is noted that the server software is within system controller 506 or 606 to be executed for scheduling the presentation of the program materials according to the data stored on the data collection memory 508 – figure 5 and 6, col. 42 lines 1-11), predicted content (video programming from virtual channel, col. 45 lines 34 – 55) that the customer's client software (within set top terminal - figure 9, col. 45 lines 9-33) is expected to acquire from the service on behalf of the customer, based on (1) billing information (updated customer profiles) for the customer received from the

Art Unit: 2681

content (col. 24 lines 4-8).

customer's client software and that describes previously broadcast content acquired by the client software on behalf of the customer (the updated customer profile containing information about the viewing history is sent from the set top multimedia terminals to the head end 502 – figure 5, col. 25 lines 7-15, 45-48, col. 29 lines 52-67, col. 41 line 57 - col. 42 line 11), and (2) a description of available content (content profiles, col. 11 lines 45-58) that will be available for broadcast by the service and that can be acquired by the plurality of customer's client software (the highest matched programs are selected for presentation as virtual channel based on the content profile and customer profile, col. 25 lines 16-30, col. 24 line 56 – col. 25 line 6); wherein one or more vectors describe the predicted content (content profiles, col. 11 lines 45-58); determining which of the one or more vectors that describe the predicted content are not valuable for predicting the preferences of the plurality of customers (col. 23 lines 65-67); and no longer using the determined not valuable vectors to describe the predicted

As to claim 2, Herz teaches that the available content includes digital movies that can be watched by the customers (col. 24 line 56 – col. 25 line 6).

As to claim 3, Herz teaches that the available content includes digital audio recordings that can be listened to by the customers (col. 49 lines 32-51).

Art Unit: 2681

As to claim 4, Herz teaches that the billing information is taken from one or more billing logs received from the customer's client software (the customer profile is sent to the head end, col. 41 line 57 – col. 42 line 11) and that identify the customer (by customer identifier interface 918 - figure 9, col. 45 line 56 – col. 46 line 18), the previously broadcast movies acquired by the client software on behalf of the customer (col. 25 lines 45-48, col. 29 lines 52-66, col. 41 lines 4-18), and the fraction of each acquired movie that was actually played back as determined by the client software (the set top multimedia terminal maintains a record of the watched channel for a period of time, col. 25 lines 31-44).

As to claim 5, Herz teaches that the predicted content for each customer is determined by performing an algorithm in the server software (the agreement matrix) that computes the relevance of one or more categories in which a movie can be placed to what the client software can acquire from the service on behalf of the customer, based on a description of the previously broadcast content identified in the billing information and that includes the one or more categories for each previously broadcast movie (the agreement matrix is created by comparing the characterization of the customer profile and content profile under categories such as film genres, directors, and MPAA rating, col. 11 lines 45-58, col. 25 lines 16-30).

As to claim 6, Herz teaches that the predicted content for each customer is determined by further performing an algorithm in the server software that

Art Unit: 2681

selects from among the available content a predicted movie whose one or more categories match the most relevant categories that were computed on behalf of the customer (the programs with the highest matching value with the customer profile and content profile is selected for presentation as virtual channels, col. 25 lines 16-30).

As to claim 7, Herz teaches a machine-readable medium (Within 506 – figure 5, col. 42 lines 1-11) having a plurality of instructions stored therein which when executed by a processor (system controller 506 or 606 – figure 5 and 6, col. 42 lines 1-11) cause an electronic system to support a broadcast service by determining, for each of a plurality of customers of the broadcast service, predicted content (video programming from virtual channel, col. 45 lines 34 – 55) that the customer's client software (within set top terminal - figure 9, col. 45 lines 9-33) is expected to acquire from the service on behalf of the customer. based on (1) billing information (updated customer profiles) for the customer received from the customer's client software and that describes previously broadcast content acquired by the client software on behalf of the customer (the updated customer profile containing information about the viewing history is sent from the set top multimedia terminals to the head end 502 – figure 5, col. 25 lines 7-15, 45-48, col. 29 lines 52-67, col. 41 line 57 - col. 42 line 11), and (2) a description of available content (content profiles, col. 11 lines 45-58) that will be available for broadcast by the service and that can be acquired by the plurality of customers' client software (the highest matched programs are selected for

Art Unit: 2681

presentation as virtual channel based on the content profile and customer profile, col. 25 lines 16-30, col. 24 line 56 – col. 25 line 6), wherein one or more vectors describe the predicted content (content profiles, col. 11 lines 45-58), by determining which of the one or more vectors that describe the predicted content are not valuable for predicting the preferences of the plurality of customers (col. 23 lines 65-67); and by no longer using the determined not valuable vectors to describe the predicted content (col. 24 lines 4-8).

As to claim 8, see rejection of claim 2.

As to claim 9, see rejection of claim 3.

As to claim 10, see rejection of claim 4.

As to claim 11, see rejection of claim 5.

As to claim 12, see rejection of claim 6.

As to claim 13, Herz teaches a server (head end 502 – figure 5, col. 41 line 57 – col. 42 line 11) to determine, for each of a plurality of customers of the broadcast service, predicted content (video programming from virtual channel, col. 45 lines 34 – 55) that the customer's client software (within set top terminal - figure 9, col. 45 lines 9-33) is expected to acquire from the service on

Art Unit: 2681

behalf of the customer, based on (1) billing information (updated customer profiles) for the customer received from the customer's client software and that describes previously broadcast content acquired by the client software on behalf of the customer (the updated customer profile containing information about the viewing history is sent from the set top multimedia terminals to the head end 502 - figure 5, col. 25 lines 7-15, 45-48, col. 29 lines 52-67, col. 41 line 57 - col. 42 line 11), and (2) a description of available content (content profiles, col. 11 lines 45-58) that will be available for broadcast by the service and that can be acquired by the plurality of customers' client software (the highest matched programs are selected for presentation as virtual channel based on the content profile and customer profile, col. 25 lines 16-30, col. 24 line 56 - col. 25 line 6), wherein one or more vectors describe the predicted content (content profiles, col. 11 lines 45-58), the server to determine which of the one or more vectors that describe the predicted content are not valuable for predicting the preferences of the plurality of customers (col. 23 lines 65-67), and the server to no longer use the determined not valuable vectors to describe the predicted content (col. 24 lines 4-8).

As to claim 14, see rejection of claim 2 and 8.

As to claim 15, see rejection of claim 3 and 9.

As to claim 16, see rejection of claim 4 and 10.

Art Unit: 2681

As to claim 17, see rejection of claim 5 and 11.

As to claim 18, see rejection of claim 6 and 12.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gary Au whose telephone number is (571) 272-2822. The examiner can normally be reached on 8am-5pm Monday to Friday.

Art Unit: 2681

If attempts to reach the examiner by telephone are unsuccessful, the

examiner's supervisor, Chris Grant can be reached on (571) 272-7294. The fax

phone number for the organization where this application or proceeding is

assigned is 571-273-8300.

Information regarding the status of an application may be obtained from

the Patent Application Information Retrieval (PAIR) system. Status information

for published applications may be obtained from either Private PAIR or Public

PAIR. Status information for unpublished applications is available through

Private PAIR only. For more information about the PAIR system, see http://pair-

direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-

free).
